

Accounting on Yannis: Quick Guide for Finance & Team

Welcome. This guide shows where accounting lives and how to use it day to day. Most of what you need is under **Accounting** in the left sidebar.

Note: Finance (cash remittance, disbursements) is a separate menu. This guide is for the **Accounting** group only.

1. Where to find things

What you need	Where in the left menu
List of all accounts (the chart)	Accounting → Chart of Accounts
Opening balances at go-live	Chart of Accounts → Post Opening Balances / View Opening Balances
Which account auto-posting uses	Accounting → Account Mappings
Manual journal entries	Accounting → Journal Entries
Vendor / staff expense claims	Accounting → Expenses
Match bank statement to ledger	Accounting → Bank Reconciliation
Full ledger lines by account	Accounting → General Ledger
Check debits = credits	Accounting → Trial Balance
Income vs expenses for a period	Accounting → Profit & Loss
Assets vs liabilities & equity	Accounting → Balance Sheet
Cash / bank movement	Accounting → Cash Flow

Tip: if you do not see a menu item, ask an admin for accounting / ledger access.

2. Who does what

Role	Main job in accounting
Finance / Accountant	Set up accounts and mappings, post journals, approve expenses, reconcile the bank, run reports
Heads / Managers	Submit expenses when needed; they may see Expenses but not the full ledger
Auditor	View ledger and reports (read access)

Everything in Accounting is **double-entry**: every posting must balance (debits = credits).

3. One-time setup (do this before day-to-day use)

Do these in order.

Step 1: Check the Chart of Accounts

Go to **Accounting** → **Chart of Accounts**.

The system already seeds a standard Nigerian-style chart (Assets, Liabilities, Equity, Revenue, Cost of Sales, Expenses, Tax, and so on).

- Review the list
- Add any extra accounts your company needs
- Edit names if needed
- Leave group accounts as groups; post only to leaf (postable) accounts

Until the chart looks right, do not rely on reports.

Step 2: Set Account Mappings

Go to **Accounting** → **Account Mappings**.

This tells the system which GL account to use when it auto-posts (sales, stock, tax, expenses, and so on).

- Review each mapping
- Change a mapping only if your chart uses a different account than the default
- You can reset a mapping back to default if you make a mistake

Wrong mappings send money to the wrong account. Fix this before go-live.

Step 3: Post Opening Balances (go-live only)

From **Chart of Accounts**, open **Post Opening Balances**.

- Enter each account's balance as at your go-live date
- Debits and credits must balance (any leftover goes to Opening Balance Equity)
- Post once when you are ready to start on the system

After this is posted, use normal journals and expenses for new activity. Do not treat opening balances as a monthly task.

4. Day-to-day flow

1. Post activity (journals / expenses / auto-postings)
↓
2. Check General Ledger / Trial Balance
↓
3. Reconcile the bank
↓
4. Read Profit & Loss, Balance Sheet, Cash Flow

A. Journal Entries (manual postings)

1. Open **Accounting** → **Journal Entries**
2. Create a new entry

3. Add lines: each line is a debit or a credit to an account
4. Total debits must equal total credits
5. Save

Statuses you will see:

Status	Meaning
Draft	Saved, not yet in the ledger reports as posted
Posted	Approved / live on the ledger
Cancelled	Rejected or reversed; not active

If your role can approve: open a **Draft** entry → **Approve and post**.

If a posted entry was wrong: use reverse / cancel (do not silently edit history).

B. Expenses

1. Open **Accounting** → **Expenses**
2. Submit a vendor / expense claim (amount, details, proof if required)
3. Finance reviews: **Approve** if correct, or **Reject** with a reason if not

Statuses: **Pending** → **Approved** or **Rejected**.

C. Bank Reconciliation

1. Open **Accounting** → **Bank Reconciliation**
2. Click **New Reconciliation**
3. Choose the bank account and statement date / closing balance
4. Match each bank statement line to the matching ledger entry
5. When everything that should match is matched, **Complete reconciliation**

Do this regularly (for example monthly) so the bank account in the books matches the real bank statement.

D. Reports (read and check)

Use these after postings are in:

Page	Use it for
General Ledger	Drill into one account's movements
Trial Balance	Confirm the books balance (debits = credits)
Profit & Loss	Profit for a period
Balance Sheet	Position as at a date
Cash Flow	How cash / bank moved over the period

Pick the date range (or as-at date) at the top of each report before you share numbers.

5. Simple monthly checklist

- ☐ Chart and Account Mappings still look correct
- ☐ All needed journal entries for the month are posted
- ☐ Pending expenses reviewed (approve or reject)
- ☐ Bank reconciliation completed for the month
- ☐ Trial Balance balances
- ☐ Review Profit & Loss, Balance Sheet, and Cash Flow

6. Quick reminders

- **Setup order:** Chart of Accounts → Account Mappings → Opening Balances (once) → then daily work
- **Never post unbalanced journals** (debits must equal credits)
- **Bank recon** is matching the statement to the ledger, not creating sales
- **Opening balances** are for go-live only
- Menu labels only: use **Accounting** → ... in the sidebar (no need to type URLs)
